Elements IV Project 1

Olivia Grace

INTRODUCTION

DID YOU KNOW THAT LIVE PERFORMANCES (IE. CONCERTS) MAKE UP 80% OF AN ARIST'S INCOME? THAT IS WHY MANY ARTISTS GO ALL OUT DURING THEIR CONCERT TOURS, TO GIVE THEIR FANS THE BEST EXPERIENCE POSSIBLE LISTENING TO LIVE MUSIC. WE OFTEN SEE GIGANTIC VIDEO SCREENS, FIREWORKS, AND WORLD TOURS THAT LAST A COUPLE OF YEARS.

BUT DO GIGANTIC VIDEO SCREENS, MORE FIREWORKS AND MORE SHOWS IN A TOUR BRING AN ARTIST MORE INCOME?

WHAT IS MORE = MORE?

THIS FOLLOWING PROJECT IS A DATA VISUALIZATION WEB APPLICATION THAT TAKES A LOOK AT THE TOP 20 GROSSING CONCERT TOURS OF ALL TIME. WE TAKE A LOOK AT THE “INGREDIENTS” OF A TOUR AND SEE WHAT IT TAKES TO MAKE A TOP GROSSING CONCERT.

TARGET AUDIENCE

The target audience for this web application is **college students** who are interested in concerts.

DATA SET & SOURCE

List of Highest Grossing Concert Tours

http://en.wikipedia.org/wiki/List_of_higest-grossing_concert_tours

Detailed Information of Concert Tours Map

DESIGN RESEARCH

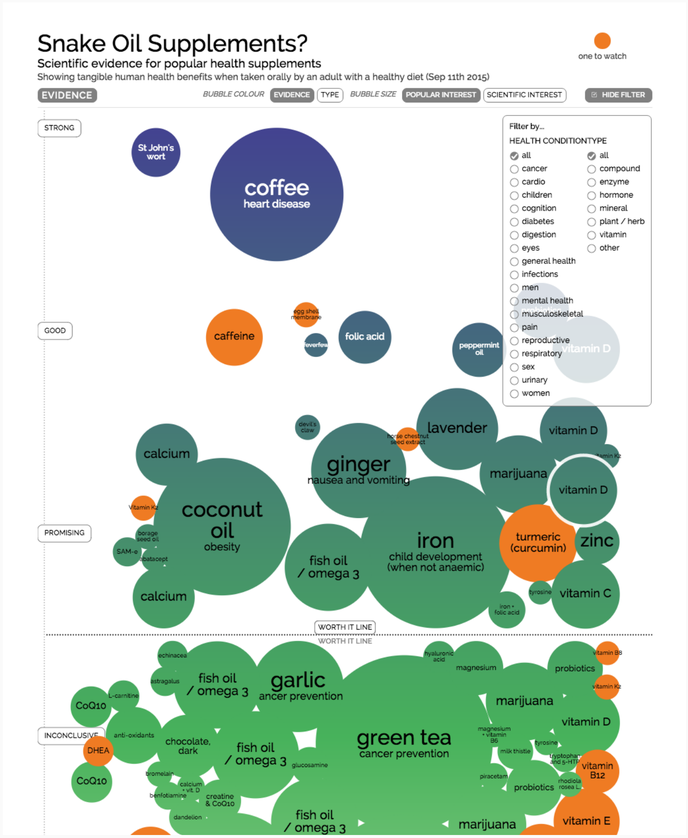
FOR MY DESIGN RESEARCH, I LOOKED AT A COUPLE OTHER DATA VISUALIZATION WEBSITES WHICH ELEMETS I CAN USE TO SHOW HOW THE TOP 20 GROSSING CONCERTS OF ALL TIME COMPARE IN REVENUE.

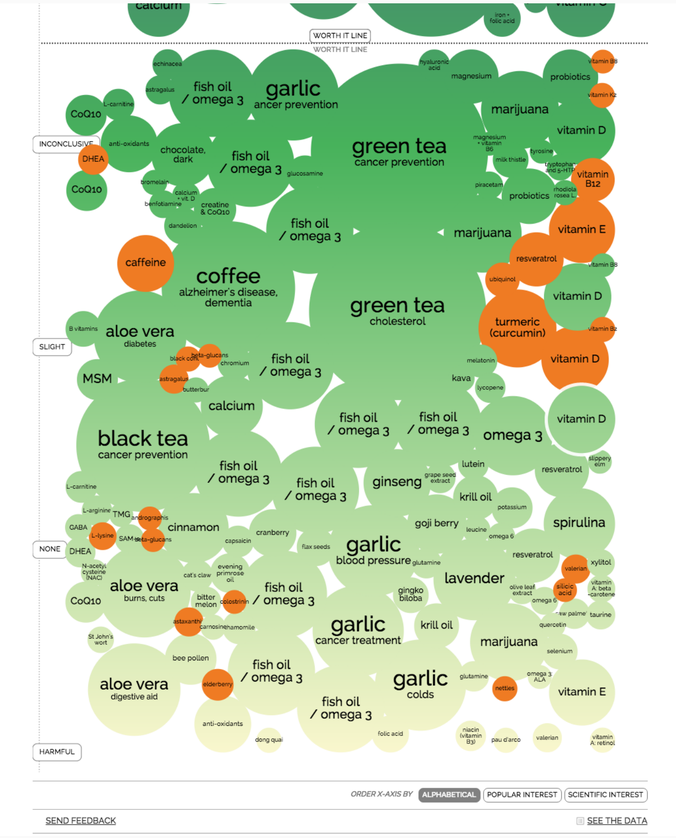
AT THE SAME TIME I WANTED TO BE ABLE TO GIVE USERS TO SEE THE DATA IN A DIFFERENT PERSPECTIVE. FOR EXAMPLE, A CONCERT'S TOTAL GROSS IN RELATION TO THE EXPENSES PUT INTO SPECIAL EFFECTS, OR THE TOTAL GROSS OF A CONCERT IN RELATION TO HOW MANY COUNTRIES THE TOUR TRAVELLED TO.

SNAKE OIL SUPPLEMENTS

http://www.informationisbeautiful.net/visualizations/snake-oil-supplements/

This data visualization uses a bubble chart to display several different information within one graph. The size of the bubble is proportionate to popular interest or scienctific interest. The colors of the bubbles changes based on how strong an evidence is. Last but not least, the location of a bubble on the y-axis is determined by how strong evidence is for the certain bubble.

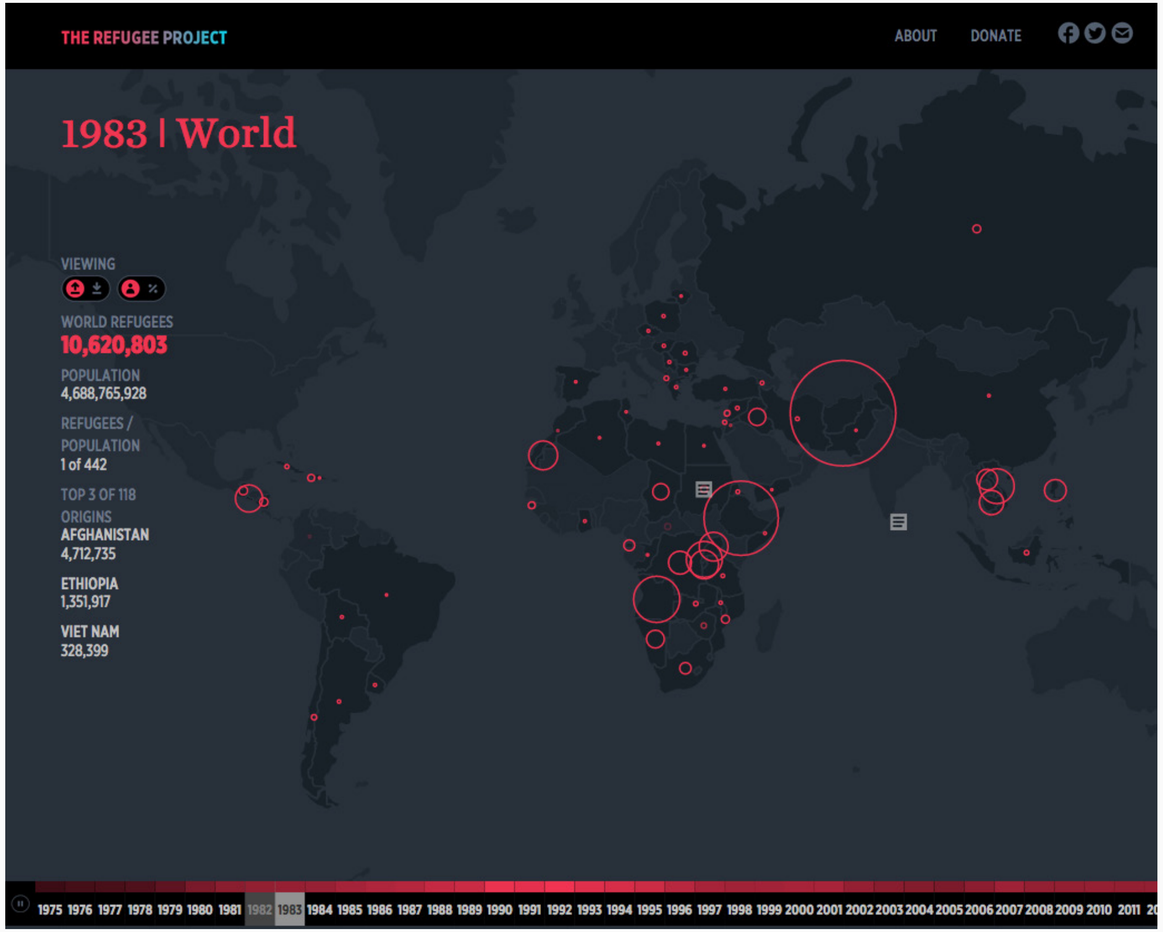




THE REFUGEE PROJECTS

http://www.therefugeeproject.org/#/1988

The refugee project is an interactive data visualizatoin web app, which displays the journey of various refugess throughout the world, starting from 1975 until 2012. I looked into this graph because I wanted to add a detail view of a concert tour journey from start to finish. The refugee gave the timeline element as well as the ability for a user to see how the data changes overtime.



ROUND 1

CONCEPTUALIZATION & EXPLORATION

MY CONCEPTUALIZATION & EXPLORATION STAGE CONSISTS OF TWO ROUNDS WHICH ARE DOCUMENTED IN THE FOLLOWING PAGES. DURING THE FIRST ROUND I WANTED TO EXPLORE A MORE ABSTRACT UI.

WIREFRAMES

Concert Details Page

This page displays detailed information on a certain concert. Including numerical data on total attendance, length of the tour, number of shows; as well as graphical data

- Tour summary
- Numerical data on the tour
- CTA: to view the Tour Journey Page
- Graph relating to numerical data
- Tour Special effects (including custom stage, fireworks, lighting, etc)

ROUND 2

CONCEPTUALIZATION & EXPLORATION

THE SECOND ROUND IS A SECOND ATTEMPT ON FIXING CERTAIN PROBLEMS WITH THE FIRST ITTERATION. SOME PROBLEMS THAT I TRIED TO TACKLE INCLUDED, ADDING MEANING IN THE PLACEMENT OF CERTAIN ELEMENTS, MINIMIZINT THE DISTRACTION WITHIN THE DATA AND CREATING DIFFERENT PERSPECTIVES OF THE SAME DATA.

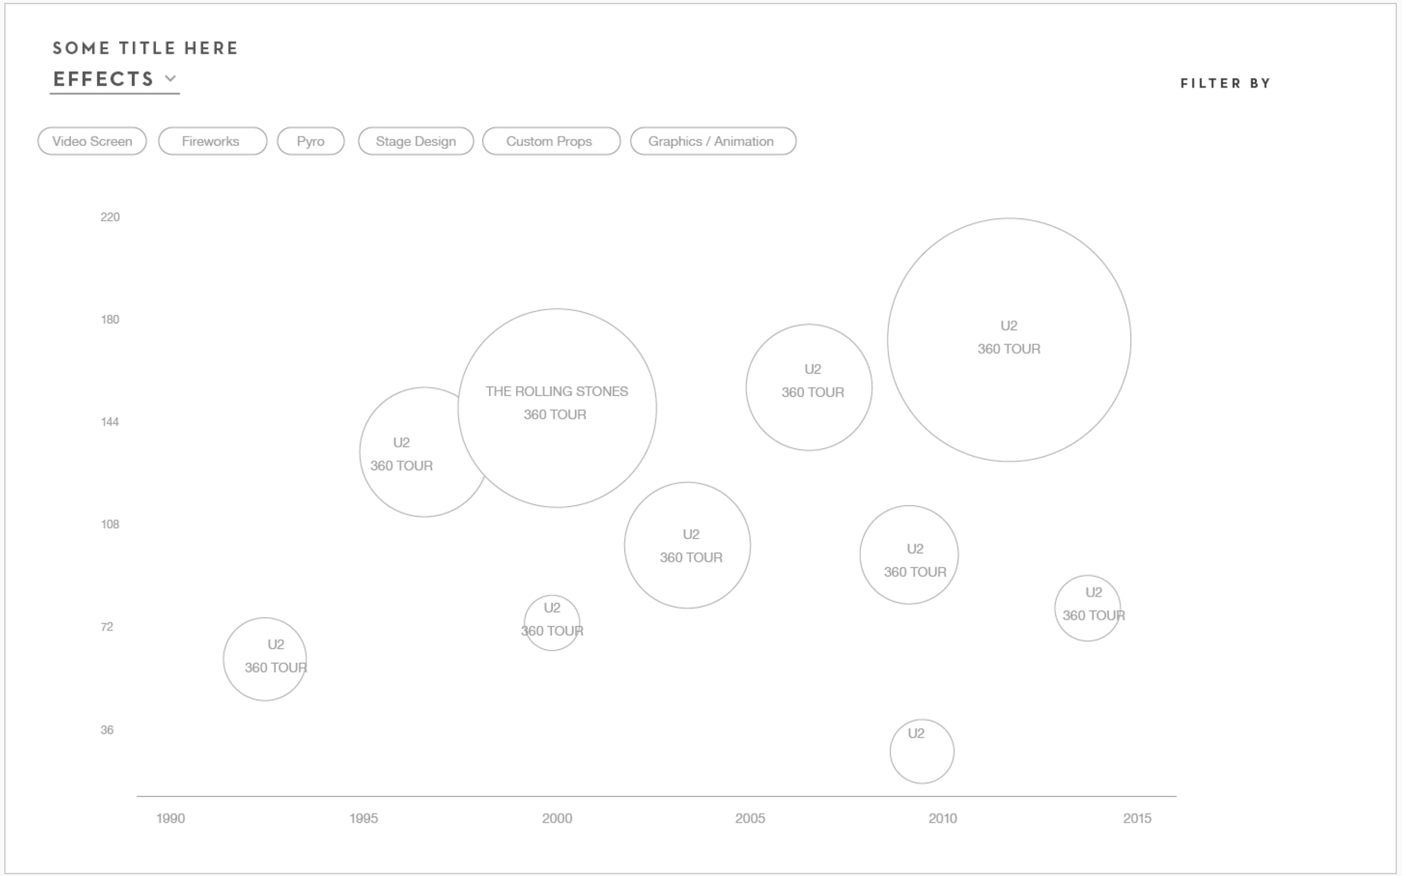
WIREFRAMES

Special Effects Page

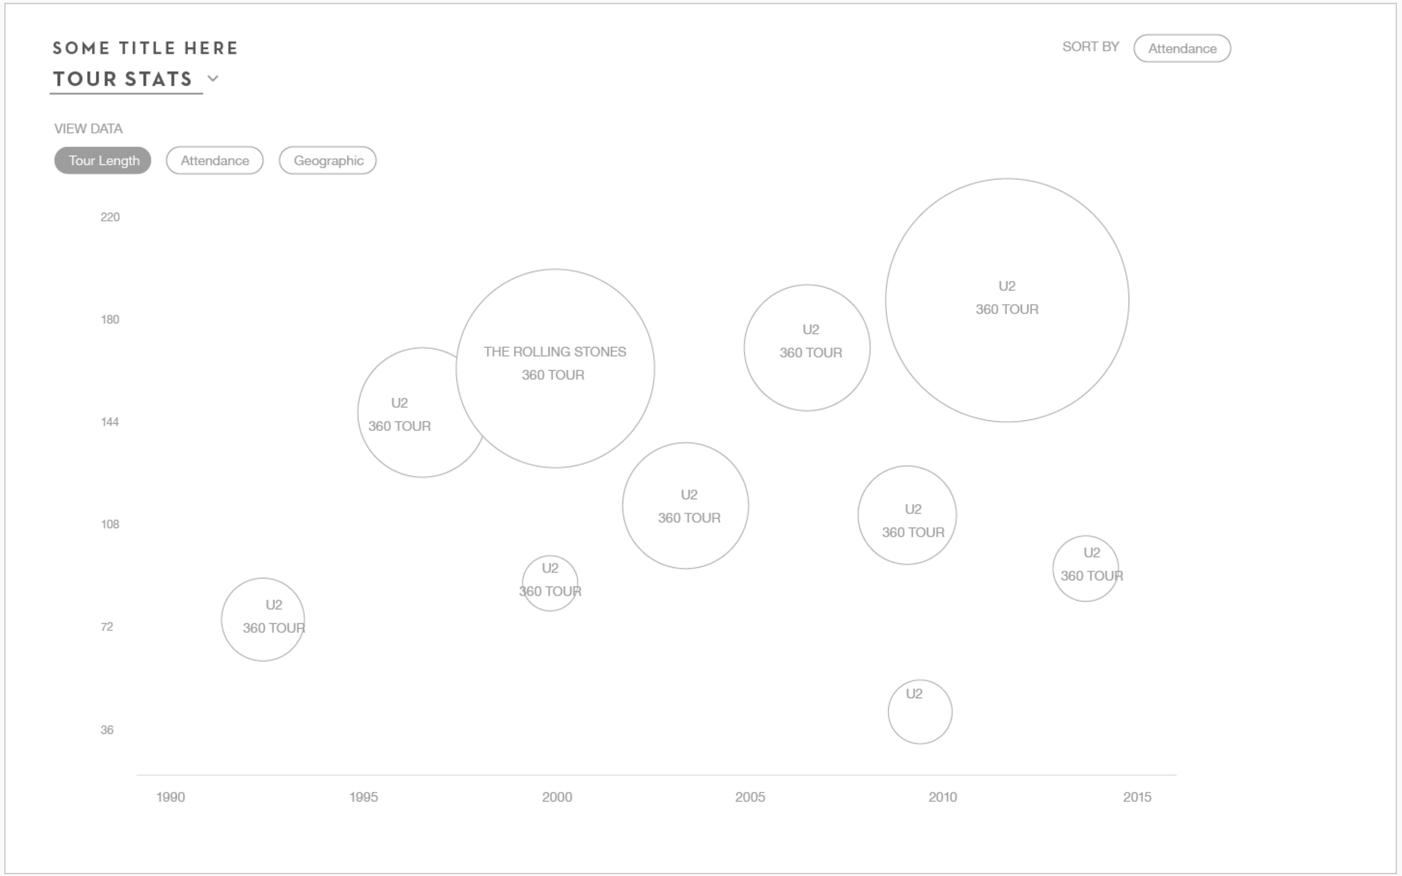
This page maps the top 20 grossing concert tours on a linear timeline (the x-axis) and on how much each of the special effects costed (the y-axis). Each bubble represents a concert tour. The size of the bubble represents the total refenue for the tour.



WIREFRAMES

Tour Statistics Page

This page maps the top 20 grossing concert tours on a linear timeline (the x-axis) and the length of a certain tour stat (the y-axis). Tour statistics include tour length, number of total attendance and how many countries were toured. Each bubble represents a concert tour. The size of the bubble represents the total refenue for the tour.



WIREFRAMES

Geographic Print Page

I wanted to map the different top 20 concert tours and then map them out on a linear timeline. As the timeline is playing, the map will show the different concert tours happening, indicated by the circles on the map. Each concert tour will have its own color. The size of the circle represents the revenue earned from that particular concert.

VISUAL DESIGN

AFTER WIREFRAMING, IT WAS TIME TO EXECUTE THE DESIGNS. FOR THIS DATA VISUALIZATION, I WANTED TO TRY EMULATE AN EDITORIAL STYLE; WHICH MEANT USING LOTS OF CONTRAST. I DECIDED TO ONLY USE BRIGHT COLORS TO HIGHLIGHT DATA.

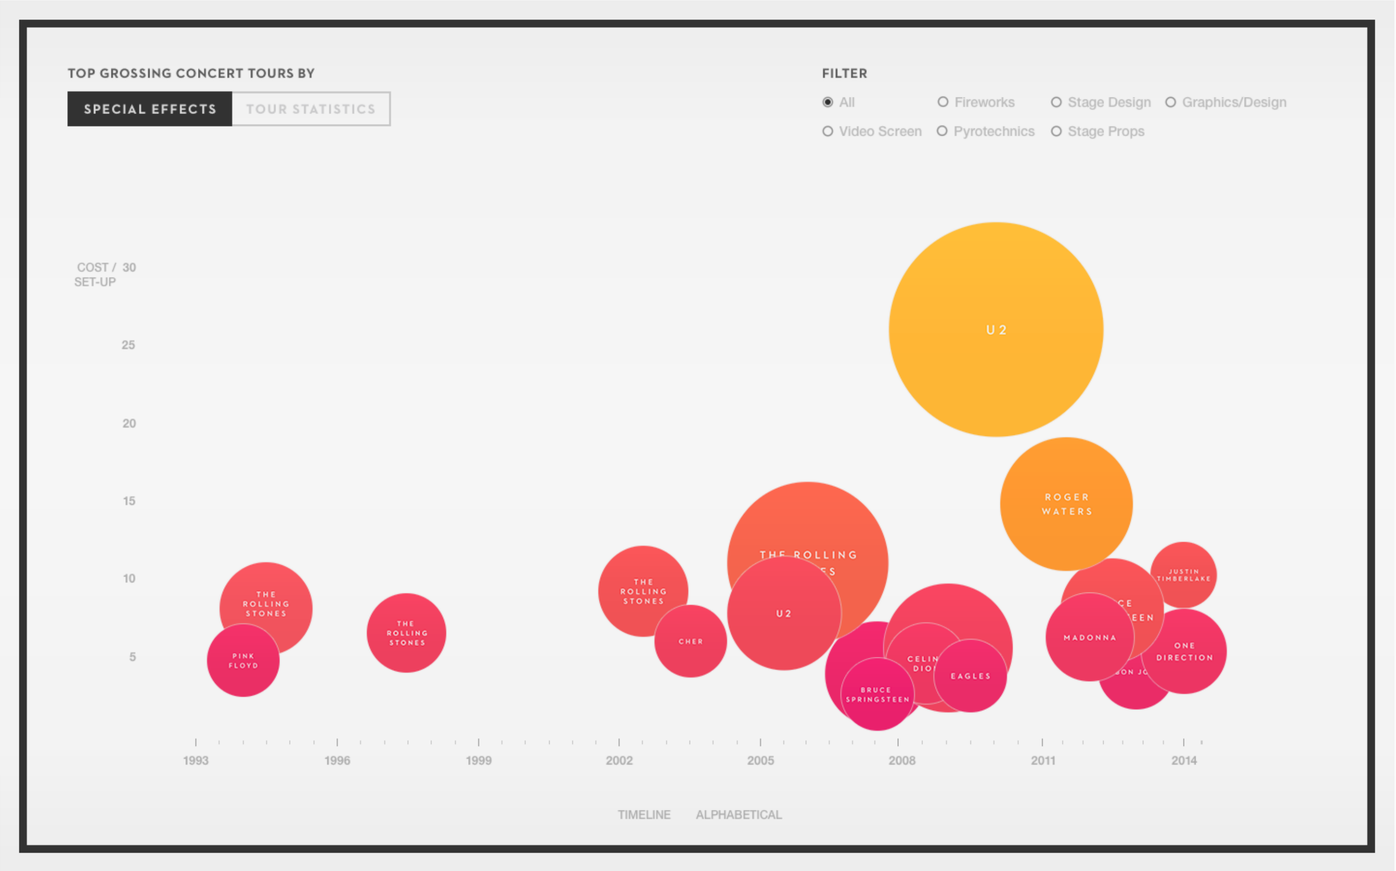
VISUAL COMPS

Special Effects Page

This page maps the top 20 grossing concert tours on a linear timeline (the x-axis) and on how much each of the special effects costed (the y-axis). Each bubble represents a concert tour. The size of the bubble represents the total revenue for the tour. The colors of the bubble also change based on how much the special effects costs. Pink represents a low cost, whereas yellow indicates a high cost.

1. Special Effects Mode or Tour Stats Mode
2. Special effects filters
3. Tour bubble
4. Y-axis shows the cost per set up
5. X-axis shows the timeline
6. X-axis modes (timeline & alphabetical)

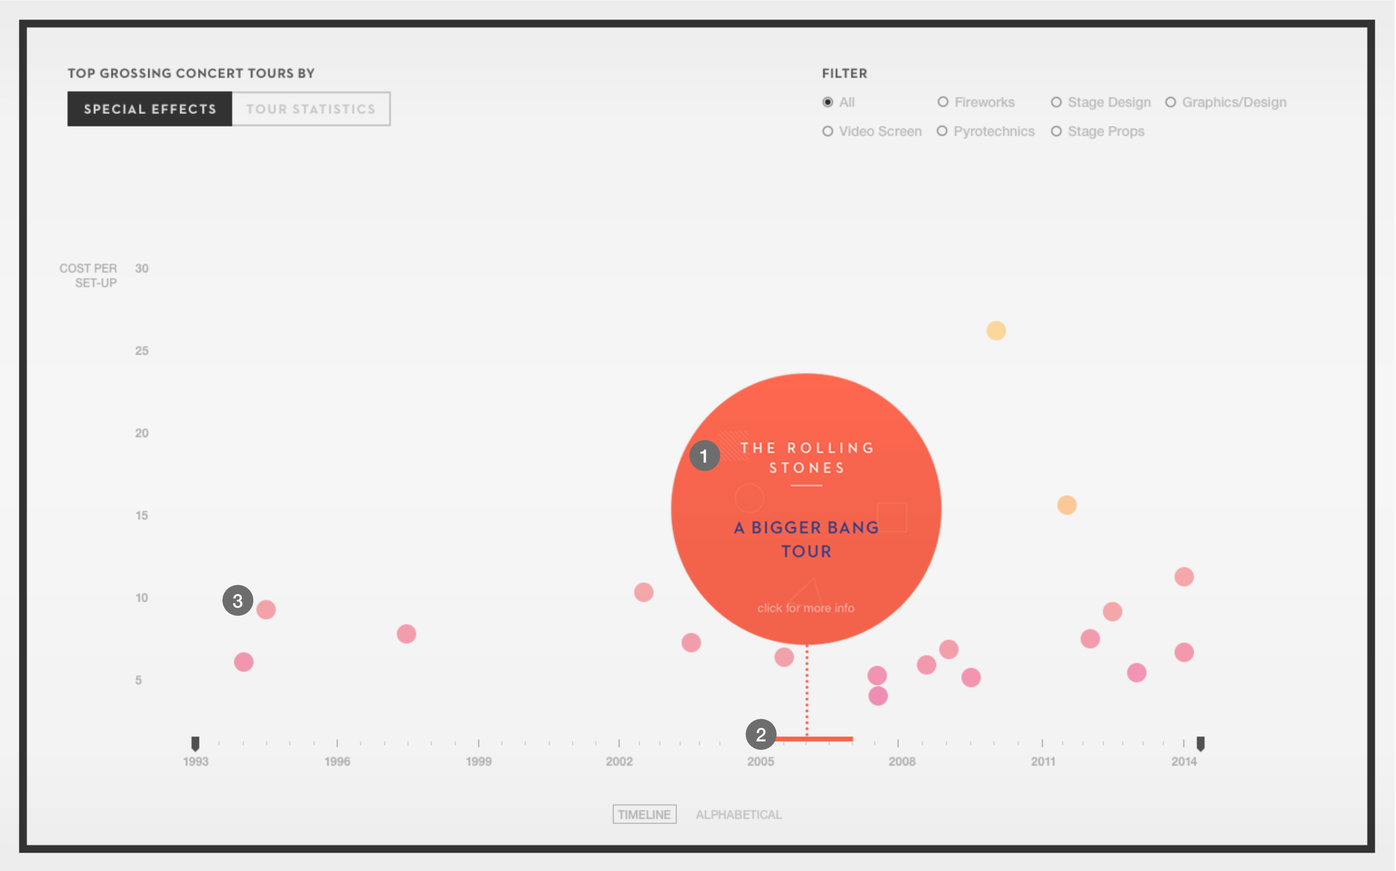


VISUAL COMPS

Special Effects Page, Hover State

When a user hovers over a concert bubble, the bubble expands to display more information.

1. The bubble expands and displays name of the concert tour, as well as the artist that did the concert.
2. A time indicator will appear on the x-axis to indicate how long the tour occured.
3. The other tour bubbles will decrease in size and fade.

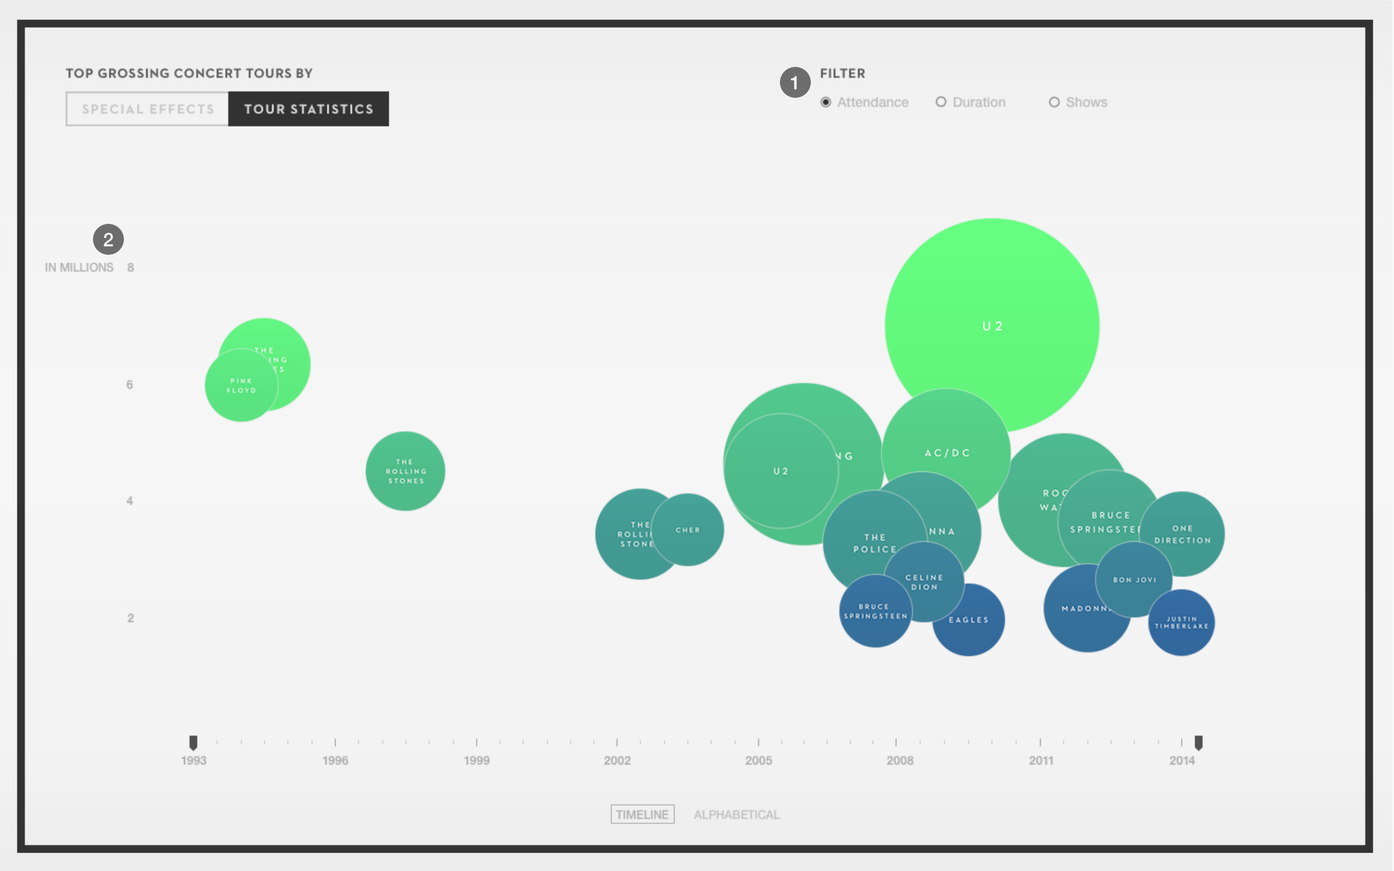


VISUAL COMPS

Tour Statistics Page

This page maps the top 20 grossing concert tours on a linear timeline (the x-axis) and the length/amount of a certain tour statistic (the y-axis). Each bubble represents a concert tour. The size of the bubble represents the total revenue for the tour. The colors of the bubble also change based on the quantity of a tour statistic. Blue represents a low cost, whereas green indicates a high cost.

1. Tour statistic filters
2. Y-axis shows the quantity



VISUAL COMPS

Tour Statistics Page, Hover State

When a user hovers over a concert bubble, the bubble expands to display more information.

1. The bubble expands and displays name of the concert tour, as well as the artist that did the concert.
2. An indicator will appear on the y-axis to show the detailed amount of a certain tour statistic.
3. If a user clicked on the bubble, it will take the users to the Tour Journey Page.

VISUAL COMPS

Tour Journey Page

This page displays maps out an artist's journey from city to city during the concert tour. The visualization is mapped on a timeline.

1. Tour name & artist
2. Tour path, indicated by the circles
3. City where the concert is occuring
4. Date of the concert
5. Concert statistics (attendance & gross)
6. Timeline (in months)
